

Extended Day Enrichment Program – WINTER 2019-2020

St. Paul Christian School is excited to offer our Fall 2019-2020 Extended Day Enrichment Program, which begins on Monday, September 16. Registration will take place on Wednesday and Thursday, September 11 and 12. Each class is filled on a first-come, first-served basis. Choose the days that interest your child and let the fun begin! *(Please see the following page for schedules, registration information, and pricing details).*

MONDAY: Picasso Kids

Through various materials, children will create their own versions of masterpieces by world class artists as well as their own original art work. This class aims to promote art literacy in children and to begin building their drawing skills such as shapes, objects, people, and perspective. We will work with various media and explore new colors and textures. "The important thing is to create!" – Pablo Picasso

TUESDAY: Sensory Science

Children are invited to explore all their senses in this exciting class. Slimy, gooey, and messy experiments will have them begging for more science! Kids will make their own play dough, slime, volcanos, and other fun projects. Calling all science kids to get dirty with these fascinating, hands-on experiments!

WEDNESDAY: Little Chefs

Sharing the joy of cooking (and eating!) with young ones helps them to develop a healthy body and mind in a fun and interactive setting. Children will learn to mix, pour, wrap, shake, spread, roll, mash, and measure! And our creative teacher will incorporate other fields into the process such as math, art and science. Come cook with us! Note: All food prepared will adhere to St. Paul Christian School's snack and food policy.

THURSDAY: Outdoor Explorers

The winter is a fun time of the year for children to spend in the great outdoors! Join us in our "outdoor classroom" as we collect, sort, and make creations with objects found in nature. We'll explore the different scientific properties of ice and snow. We'll scour the schoolyard for signs of winter. We'll discover what the earth does in this time of rest. We'll make sculptures out of snow and objects we find in nature. Pack your snow gear, winter is here!

FRIDAY: Arctic Animal Art

Take a ride on the wild side! Do you know which animals live in the arctic? Find out what it takes to thrive in this harsh climate. We will explore a new animal each week and make an art project about animals who flourish in the cold. We will learn through stories, games, and lots of art! Children will create a "passport" of their adventures to take home at the end of the session. Pack your bags and join us for world of fun!
